PROFESSIONAL PROFILE

I lead organic and AI search for Triumph International, a global fashion e-commerce business, across 15+ sites in EMEA and APAC. My work sits where content meets search: making brand and product content discoverable, and accurately represented, on search engines and on LLMs such as ChatGPT, Perplexity, Gemini, and Claude. I build what the job needs – an AI pipeline for product copy at catalogue scale, an in-house LLM visibility tracker that leadership now follows alongside traditional KPIs – and set the standards the regional teams work to. When colleagues or senior leaders need to make sense of where generative search is heading, I am usually the person they ask. Alongside Triumph I am Product Owner of Verbalist, an AI content-generation B2B SaaS, where I run pre-sales and customer presentations. Earlier agency work included technical SEO on Adobe Experience Manager and other enterprise CMS platforms, SEO for the open-finance platform Fabrick (Sella group), and ASO for client apps.

CORE SKILLS

- **AI search & LLM discoverability:** Generative Engine Optimisation (GEO), Answer Engine Optimisation (AEO), AI Overviews (AIO), AI-visibility KPIs (discovery rate, share of voice, citation share, prominence/MRR, sentiment gap), accuracy audits of assistant claims against brand facts, AI crawler log analysis, llms.txt and Markdown for agents, entity authority (Wikipedia, Wikidata, sameAs), community platforms (Reddit, YouTube, forums) and review ecosystems as AI citation sources, E-E-A-T, RAG, prompt engineering, LLMs (GPT, Claude, Gemini).
- **Content & digital communication:** content strategy for e-commerce, PDP content optimisation (product descriptions and metadata at scale), multilingual and entity-based content, AI-generated content workflows, digital PR, brand mentions and link development, exec-level reporting and presentations.
- **Technical SEO & architecture:** international and multilingual SEO, hreflang, site architecture, semantic HTML, schema markup and structured data, JavaScript SEO, crawl budget and indexation, Core Web Vitals and page speed, CDN configuration (Cloudflare), web fundamentals (HTML, CSS, JavaScript).
- **App store optimisation (ASO):** Apple App Store and Google Play, app launches from pre-launch to publication, keyword and metadata strategy, store-listing optimisation and localisation, competitor monitoring, App Store Connect and Google Play Console.
- **AI development & automation:** Python, SQL/PostgreSQL, FastAPI, AI coding tools (Claude), agent and workflow prototyping, N8N, Make, Zapier, API integration, web scraping, NLP/NLU.
- **Analytics & experimentation:** GA4, Google Search Console, Screaming Frog, Semrush, Looker Studio, AI visibility tools (Profound, Peec, Otterly), DataForSEO AI Optimization and SE Ranking AI APIs, A/B testing and controlled experiments.
- **Product & stakeholder management:** pre-sales and solution presentations, roadmap and backlog prioritisation, Kanban and Scrum, pricing and packaging, cross-functional work with engineering, design, commercial, and legal teams.

PROFESSIONAL EXPERIENCE

SEO & AI Search Manager

May 2025 – Present

Triumph International, Zurich, Switzerland

- Own organic and generative search across 15+ multilingual fashion e-commerce sites in EMEA and APAC, including Hong Kong and Japan, and set the standards the regional teams work to.
- Built an AI pipeline that writes multilingual PDP copy (product descriptions) for 10,000+ SKUs, which removed the manual copywriting backlog.
- Designed and built an in-house AI-visibility tracker across 9 markets and four assistants (ChatGPT, Perplexity, Gemini, Claude), measuring discovery, share of voice, citation share, prominence, and sentiment with a control-group design; it benchmarked the brand as category leader for unprompted AI discovery.
- Turned the tracker into a production web app and into leadership reporting: AI search now sits next to traditional KPIs, as a revenue line rather than a ranking report.
- Run recurring citation studies (latest: 108 recorded answers across four markets) to map which pages and competitors hold the citations in AI answers, and turn the findings into canonical, redirect, and digital-PR priorities.
- Took the location intent from third-party directories: structured store-locator pages are now the cited source in AI answers across three markets.
- Own ASO for the Triumph app, taken from pre-launch to publication on the Apple App Store and Google Play: keyword and metadata strategy, store-listing optimisation and localisation.
- Run the technical work that makes the brand legible to AI: structured data and entity authority (schema,

Wikidata, sameAs), server-log analysis of AI crawlers (GPTBot, ClaudeBot, PerplexityBot), and agent-ready delivery on Cloudflare (Markdown via content negotiation).

- Coordinate a five-person cross-functional working group (SEO, content, dev, paid media) across regional teams and with engineering and IT.

Product Owner – Verbalist 2.0 (AI Content-Generation SaaS)

May 2025 – Present

NUR Digital Marketing, Mantua, Italy (consultant, parallel to Triumph)

- Own the roadmap for an AI content-generation product across versions v2.0 to v2.2, prioritising the backlog on a Kanban board and shipping weekly.
- Led pre-sales for an enterprise case, presenting and scoping the solution: 1,900+ product descriptions for a furniture retailer.
- Reworked pricing twice, from token-based to per-content to a two-tier model (€270 and €500), and designed the free-trial and prepaid incentives.
- Run a distributed team of five (backend, frontend, tech lead, CEO, external DPO), turning commercial needs into specs.
- Ran a beta with around 100 university users to validate v2.1, with feedback through Microsoft Clarity and surveys.

SEO Specialist, Innovation Lead

Sep 2022 – Apr 2025

NUR Digital Marketing, Mantua, Italy

- Led SEO for e-commerce and retail clients: international migrations, technical audits, entity-based content.
- Owned senior client relationships across enterprise accounts and led the client-facing presentations, translating SEO into commercial terms.
- Delivered SEO for Fabrick (open-finance platform, Sella group), gaining hands-on experience with search in a regulated financial-services environment.
- Ran ASO for client apps on the Apple App Store and Google Play: keyword and metadata optimisation, store listings, and performance monitoring.
- Owned technical SEO delivery on enterprise CMS platforms, including Adobe Experience Manager, Sanity, Magnolia, and WordPress: crawl and rendering analysis, log-file analysis, Core Web Vitals, JavaScript SEO.
- Built automation with Python, N8N, and Make on top of the GPT and Claude APIs to generate metadata at scale, documented so non-technical colleagues could run it without me.
- Coached junior SEOs on technical SEO, JavaScript rendering, and AI tooling.

SEO Specialist

Sep 2020 – Sep 2022

TeseCom, Pisa, Italy

- Full SEO ownership: technical audits, content strategy, entity optimisation, and GA4/Looker Studio dashboards for stakeholder reporting.

SEO Specialist

May 2019 – Sep 2020

Brand-On, Pisa, Italy

- Local SEO, on-page optimisation, link building, and JavaScript rendering fixes for small-business clients.

SELECTED SIDE PROJECTS

- **Vision Describe:** Turns product images into multilingual product descriptions with GPT-4 Vision, built for large e-commerce catalogues.
- **serp-secrets.com:** Personal blog and Semrush Ambassador platform on GEO, AEO, and AI search.
